

Emanon Consultants Inc. provides Cloud based IOT, AI/ML services and development of database and distributed business applications for enterprise IT, engineering and financial industries. We have extensive experience providing Information Technology and engineering services to wide range of clients varying from small companies to those as large as AT&T, Prudential Financials, CIGNA and ABB. We provide consulting support - both on a time and material basis as well as a turnkey basis.

IOT Business Model

Emanon Inc., a subsidiary of Emanon Consultants, Inc is located in Silicon Valley, California and specializes in IOT services. Our business unit has developed an Amazon Web Services (AWS) based Software as a Service (SaaS) Cloud to implement IOT services for our clients. The key differentiators of this model are:

- Clients do not have to build and manage on-premise infrastructure, instead they get access to all their IOT data from anywhere from the Emanon cloud. Our model supports work from home scenarios and remote collaborations.
- The Emanon Cloud leverages AWS security and principles of data isolation so client data is kept separate.
- This IOT model is not capital intensive. Clients pay monthly based on Cloud usage
- Leverages AI/ML capabilities to analyze IOT data in real time and predict equipment failures from pattern anomalies detected.
-

Enterprise and Engineering Services

This business unit is chartered with providing Cloud and AI/ML services to IT enterprises along with engineering services to utilities and manufacturing. The key differentiators of this business unit are:

- For IT services we take an enterprise architecture approach. We work with our clients to understand their business goals and their business capabilities matrix. We then map this to their IT Capabilities discovering new capabilities or deficiencies in IT capabilities. A ROI analysis is performed if these capabilities can be moved to the cloud and if specific use cases can benefit from AI/ML models. We develop and robust robust Cloud or Datacenter applications and databases for our clients
- For engineering services, we try to understand our client's business goals and track their ROI for engaging Emanon in their projects. In our work we try to recommend a technological upgrade path to our clients along with mitigating cybersecurity risks
